MONTHLY EMERGING MARKETS REPORT

In association with:

Graph 1: Global Real Estate vs Emerging Markets & AIM - Total Returns (EUR) Rolling 36 Months Performance

Comment

The FTSE EPRA/NAREIT Emerging Markets and AIM Indices are free float weighted. Full details of the free float weightings for each company are downloadable from the www.epra.com website. The ground rules are also available from the website.

Index downloads are available to the members of the association on a daily basis from www.epra.com. FTSE offer a constituent product that enables users to accurately benchmark against the FTSE EPRA/NAREIT Global Real Estate Index series. For more information, contact FTSE at info@ftse.com.

* Companies marked with * throughout the bulletin are tax transparent. Source of the REIT classification is the local stock exchange.

All calculated returns in the bulletin are geometric means.

Asset Class Comparisons and Correlations

The asset classes are defined as follows. For real estate, the FTSE EPRA/NAREIT indices are used. For broad equities, the national headline index is used (i.e. FTSE 100, CAC 40 etc.) and for multi-country profiles, the FTSE All-world index series is used. For bonds, the JPMorgan Bond index series is used.

Dividend Yields

The dividend market capitalisation (defined as the dividend multiplied by the shares in issue and free float percentage) paid during the last twelve months as a percentage of the investable market capitalisation of the index.

Risk/Return Profiles

The risk/return profile-value is determined by the 10Y average risk (calculated by the standard deviation) on the X-axis and the 10Y average return on the Y-axis.

Velocity

This liquidity measure is calculated by the number of shares traded over a 12-month period divided by the free-float adjusted shares in issue at the end of the period.

Volatility

The volatility shows the variability of returns over a 12-month period, revealing the extent by which the returns of an index value change from the average. Low volatility indicates the returns for an index have stayed quite close to the average whereas a high volatility would indicate a larger fluctuation over the time period. Volatility can therefore be seen as a market measure for risk.
