EPRA Net Asset Value Report

Net Reinstatement Value
Net Tangible Assets
Net Disposal Value

May 2022

FTSE EPRA Nareit Global Real Estate Index Series

METHODOLOGY

Premiums / Discounts have been calculated as: $(\text{Share price} / \text{Average NAV per share}) - 1$

Average NAV per share is calculated as the simple average of the 3 EPRA NAV Metrics as specified in the EPRA BPR 2019 Guidelines*:

- 1) EPRA Net Reinstatement Value (NRV)
- 2) EPRA Net Tangible Assets (NTA)
- 3) EPRA Net Disposal Value (NDV)

* The methodology for computing each of the EPRA NAV Metrics is available on EPRA Website: <https://www.epra.com/finance/financial-reporting/guidelines>

The 3 EPRA NAV metrics per share are taken from company reports. NO adjustments have been made.

When not available, the NAV per share has been calculated as: $\text{Total Assets} - \text{Total Liabilities} / \text{number of shares outstanding}$.

Discounts have been calculated for EPRA Index constituent for their respective inclusion times. Minus constituents of which no data was available.

Reasons for non-availability are: Property values stated at historical costs and not market or fair value, or historic data could not be found.

At the back of this document a complete list of contributing companies can be found

New NAV data will replace old NAV data for the months following the previous latest published NAV data.

Share prices are month-end closing prices.

Aggregates have been calculated on a NAV-based weighting.

Methodology for computing Premiums / Discounts based using the simple average of the new 3 EPRA NAV metrics (NRV, NTA, NRV) has been implemented in Mar/21. Before to Mar/21, all the computations were performed using the EPRA NAV per share instead of the simple average of the 3 metrics.

As-of January 2012, the historical NAVs and Discount to NAVs are also being calculated using interpolated company NAV data. Previously, the imbalance between reporting dates (annually, biannually or quarterly) and share prices (monthly for this report) led to more volatile NAV performance graphs.

As-of January 2012, the historical NAVs and Discount to NAVs are also being calculated using interpolated company NAV data. Previously, the imbalance between reporting dates (annually, biannually or quarterly) and share prices (monthly for this report) led to more volatile NAV performance graphs.
